

ALEKSANDAR DUBLJEVIC

416-312-8161 | TORONTO | ADUBLJEV@UWATERLOO.CA | ALEXDUBLJEVIC.COM | [LINKEDIN](#) | [GITHUB](#)

EDUCATION

University of Waterloo & Wilfrid Laurier University

Bachelor of Computer Science and Bachelor of Business Administration Double Degree

Awards: Pearl Sullivan Hack the North Scholarship | Relevant Coursework: Data Structures and Algorithms

Expected May 2028

Waterloo, ON

EXPERIENCE

AI Engineer

Jan. 2026 – April 2026

RBC Capital Markets

Toronto, ON

- Architected a text-to-SQL **MCP** server enabling **50+ traders** to query **400M+ rows** of live and historical trade data in natural language, with insights driving **\$120M in trades** within its first week of production deployment
- Built **MLflow** evaluation pipelines for an internal LLM news retrieval system used by **650+ employees**, enabling benchmarking that identified failure modes and validated fixes that improved accuracy from **35% to 95%**
- Developed Python scripts to migrate **2,000+ client profiles** from a legacy FX pricing system, repairing and normalizing inconsistent data and surfacing repricing opportunities worth **\$700k in incremental revenue**
- Deployed AI agents using the **Claude Agents SDK**, creating a shared library of reusable skills and sub-agents that automated workflows for trading desks, increasing median monthly AI usage from **7 to 15 days per user**

Cloud Engineer

Jan. 2025 – April 2025

Canadian Imperial Bank of Commerce

Toronto, ON

- Deployed and tested Azure resource configurations (Databricks, VMs, Storage) for enterprise applications across dev/test/prod environments, completing **63 Jira tickets** with zero post-deployment rollback incidents as part of an Agile Scrum team
- Automated Azure resource deployments by executing **Terraform** scripts through **Azure DevOps** pipelines, reducing manual provisioning time by **40%** while ensuring version-controlled, consistent infrastructure across environments
- Resolved a **SEV2** outage impacting critical banking services by tracing network flows with **Azure Network Watcher** to identify misconfigured firewall rules, collaborating with senior engineers to restore connectivity for thousands of users within 2 hours

Software Engineer - Dashboard Lead

Sept. 2023 – Dec. 2025

University of Waterloo Formula Electric

Waterloo, ON

- Led the development of an internal **Grafana** dashboard for live telemetry, enabling team members to monitor real-time performance from over **150 data sources**, eliminating the need to restart the vehicle to view sensor data
- Enhanced sensor data transfer rate by over **500%** by designing and implementing a wireless data pipeline
- Ensured timely development and deployment of team software by utilizing SDLC and Agile methodologies for effective project management, leading to increased team velocity and a **35%** reduction in work-in-progress tasks

PROJECTS

LLM RL Training (Qwen 4B) 🧙 | Python, Tinker, vLLM, Hugging Face

- Trained a 4B parameter Qwen model to **99%+ solve accuracy** on NYT Connections puzzles via supervised fine-tuning (LoRA) followed by GRPO-based **reinforcement learning**
- Designed a **verifiable reward scheme** around objectively checkable groupings, incentivizing correctness and token efficiency
- Deployed the model locally using **vLLM**, constraining context size and leveraging prefix caching to reduce redundant computation during multi-turn inference

Dime Defender 🧙 | Hack the North 2024 Finalist — AWS, ElevenLabs, Voiceflow, OpenAI API

- Voted **1st place** among **800+ participants** at Hack the North 2024 for developing a Chrome extension with AI generated spending interventions during e-commerce checkout flows to reduce impulsive purchases
- Architected a scalable **AWS** serverless backend (Lambda, API Gateway) that supported over **75** concurrent users, achieving **sub-500ms** response times through API request optimizations like pagination and payload compression

MpoxMap 🧙 | Ignition Hacks 2024 Winner — TypeScript, React, Next.js, HTML/CSS

- Developed MpoxMap, a web application using **Next.js 14** and **React** that monitors global Mpox outbreaks using **3D data visualizations**, displaying real-time and historical data, keeping users informed on the latest outbreaks
- Implemented API caching to reduce redundant calls to TheNewsAPI and Mapbox API, improving page load times by **200%**, resulting in a smoother user experience and reduced API costs

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, TypeScript, HTML/CSS, SQL, Shell Script, Ruby, Go, Rust

Frameworks: React, Node.js, Next.js, CI/CD, AWS, Azure, Kubernetes, Ruby on Rails, Agile, SDLC

Developer Tools: Git, Github, Docker, Tableau, Atlassian Suite, Power BI, MS Office, Terraform, Cursor, Claude Code
